

# Nondestructive Testing FPI / MPI

## Fluorescent Penetrant Inspection

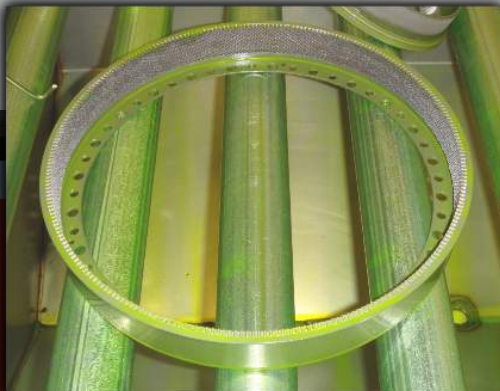

- Used on ferromagnetic and non-ferromagnetic materials.
- A very quick and reliable test that provides a thorough examination for indications open to the surface.
- Equipment suited for in-process control for ferrous and non ferrous weldment.
- Able to be used on a variety of shapes and sizes.
- A simple test method that can be applied to finished items as well as processes such as heat treatment, machining, blending and grinding.

## Magnetic Particle Inspection

- Used on ferromagnetic materials
- Able to detect surface and near surface discontinuities.
- Able to be used on a variety of shapes and sizes.
- A simple test method that can be applied to finished items as well as to processes such as heat treatment, machining, blending and grinding.
